## **Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

- 1. (Currently amended) A method for monitoring the <u>therapeutic</u> effect of a therapeutic composition on cancer in a mammal, <u>wherein the mammal with cancer has an elevated level of phosphorylated PAK4, comprising which method comprises:</u>
- (i) measuring a first PAK4 on ser-474 phosphorylation level in a first biopsy obtained from said mammal before administration of a therapeutic composition to said mammal; and
- (ii) measuring a second PAK4 on ser-474 phosphorylation level in a subsequent biopsy obtained from said mammal after administration of the therapeutic composition to the mammal,

wherein a lower level of PAK4 phosphorylation on ser-474 in the subsequent biopsy compared to the first biopsy indicates that the therapeutic composition has [[an]] <u>a</u> therapeutic effect on the cancer in the mammal.

- 2. (Original) The method of claim 1, wherein the mammal is selected from the group consisting of a human, rat, mouse, pig, cow, goat, monkey, cat, and dog.
  - 3. (Original) The method of claim 1, wherein the mammal is a human.
  - 4.-5. (Canceled)
- 6. (Previously presented) The method of claim 1, wherein the cancer is colon cancer.
- 7. (Original) The method of claim 1, wherein either or both of the biopsies are suspected of containing cells capable of anchorage-independent cell growth.
- 8. (Original) The method of claim 1, wherein neither the first nor the second biopsy is suspected of containing cells capable of anchorage-independent cell growth.
  - 9. (Original) The method of claim 1, wherein either biopsy is a tissue biopsy.
- 10. (Original) The method of claim 9, wherein the tissue is buccal mucosa tissue, skin, hair follicles, tumor tissue, or bone marrow.

- 11. (Original) The method of claim 1, wherein either biopsy is a biological fluid.
- 12. (Original) The method of claim 11, wherein a biopsy is selected from synovial fluid, whole fresh blood, peripheral blood mononuclear cells, frozen whole blood, fresh plasma, frozen plasma, urine, and saliva.
- 13. (Original) The method of claim 1, wherein the therapeutic composition effects a change in one or more of physiological, biochemical, genetic, cellular, or immunological traits of the mammal.
- 14. (Original) The method of claim 1, wherein the first and subsequent biopsies are taken from a tumor in the mammal.

## 15.-17. (Canceled)

- 18. (Previously presented) The method of claim 1, wherein a first level of phosphorylated PAK4 in the first biopsy obtained from the mammal is measured at least 1 day before administering the therapeutic composition to said mammal.
- 19. (Previously presented) The method of claim 1, wherein a first level of phosphorylated PAK4 in the first biopsy obtained from the mammal is measured at least 5 days before administering the therapeutic composition to said mammal.
- 20. (Previously presented) The method of claim 1, wherein a first level of phosphorylated PAK4 in the first biopsy obtained from the mammal is measured at least 14 days before administering the therapeutic composition to said mammal.
- 21. (Original) The method of claim 1, wherein administration of the therapeutic composition comprises at least one dose of the therapeutic composition.
- 22. (Original) The method of claim 1, wherein administration of the therapeutic composition comprises a regime of multiple doses of the therapeutic composition.
- 23. (Original) The method of claim 22, wherein the doses are administered during a period of 4 hours up to about 100 days.
- 24. (Original) The method of claim 1, wherein the subsequent biopsy is obtained from the mammal after administration of the final dose of said therapeutic composition.
- 25. (Original) The method of claim 22, wherein multiple biopsies are obtained from the mammal during the regime.

26.-62. (Canceled)
